

Security Management

Watchdog Server

For WorkSite

Works™ with
WorkSite ✓

Prevent content theft, block unauthorized use of intellectual property, and receive instant notification of suspicious - or desired - user activity on an organizational level with Watchdog Server. This centralized solution is a comprehensive tool that can intercept, report on, and take action on all activity in WorkSite regardless of the source or type of operation.

Only with Watchdog Server can you continuously monitor all activity directly in one or more WorkSite databases, and instantly notify specific users or groups, to both maximize security and increase productivity. If you want to know what is happening in WorkSite, you can do it with Watchdog Server.

Key Features

- Monitor 18 different WorkSite user operations in real-time including: Check In, Check Out, Create, Export, Delete, Print, View, E-Mail, Modify Security, etc.
- Intercept and report on all activity, block activity, disable user accounts, or initiate workflows to prevent theft and unauthorized IP removal.
- Notify specific users or groups instantly and automatically (i.e., attorneys can be informed of remarkable activity on their matters, or by users they manage).
- Disable user accounts automatically if activity exceeds preset thresholds.
- Launch workflow processes and pass event data to external programs.
- Customize notification content to include very detailed event, user, and document-by-document information.
- Generate notifications based on metadata filters to alert users of specific matter activity (i.e., collection notices, document creation by external users, security edits, copying of forms, etc.)

SERVER

Watchdog

Transaction Monitor

For WorkSite

Works™ with
WorkSite ✓

Prevent document theft, unauthorized removal of intellectual property, and foolish or dangerous user operations with Watchdog Transaction Monitor. This desktop solution invisibly monitors user activity, automatically sending administrative notifications or even preventing users from completing specific operations.

Key Features

- Monitor operations by users including: bulk security edit, check out, export, delete, print, view, send document, and send link.
- Invisible to users, with optional customizable warning messages when operations are blocked.
- Set individual operation thresholds on a user-by-user basis.
- Track daily cumulative operations and lifetime cumulative operations per user.
- Send silent notification to designated system administrator for flagged behaviors or blocked operations.
- Integrate with OffSite to track events in Portable Mode.

DocAuto [has] indispensable tools... We have also relied heavily upon DocAuto's technical expertise and support to assist us.
