

Multi-Factor Authentication

Overview

Basic passwords that are rarely changed are easy to remember but are also easy to compromise. Companies are increasingly being targeted and infiltrated with critical data being held to ransom by hackers.

The Australian Government has introduced new amendments to the Privacy Act requiring mandatory notifications of data breaches in addition to the existing strict privacy laws already in place.

Multi-factor authentication adds a second layer of security to your online accounts by verifying your identity using your phone or other mobile device to prevent anyone but you from logging in.

Why does your company need Multi-Factor Authentication (MFA)?

Multi-Factor Authentication keeps your account secure even if your password is compromised and will alert you instantly if someone is trying to log in as you.

This comprehensive security solution confirms the identity of users as well as the health of their mobile devices before they connect to a network, using Trusted Users. In order to verify trusted user's identities, MFA requires two methods of identification.

Additionally, Trusted Devices give administrators complete control over who and what is accessing the organisation's data and checks the security settings of devices before they access applications and data.

Multi-factor Authentication also collects detailed data on every authentication request so that informed security policy decisions can be made within the organisation, in addition to reporting on whether mobile devices are up to date.

Key Features

- > Seamlessly verifies a trusted user’s identity by using two forms of identification
- > Quick and straightforward to implement; can be installed remotely
- > Detailed data is collected on every authentication request so that informed security policy decisions can be made
- > Reports on whether mobile devices are up-to-date
- > Compatible with most devices, including iPhone and iPad, Android, Windows Phone, Mobile Phones and Landlines, and Hardware Tokens.

Why Partner With OIA?

- > **Strong Reputation**
OIA has been implementing and managing backup solutions for customers for over 20 years and is constantly evolving these solutions in-line with current technology and industry trends.
- > **Scalable**
OIA will ensure any solution meets your needs today but just as important, is capable of scaling as your business grows.
- > **Compatibility**
There is no silver bullet, every business has different needs now and into the future. OIA will determine the best solution based on your specific requirements.

What else can OIA do?

OIA is partnered with industry leading vendors to source best of breed products which we use to tailor solutions that meet your specific requirements:

- > **Monitoring + Support**
OIA can provide real-time monitoring & management oversight of your network and IT assets 24x7. This ability to continually monitor the stability and security of your IT network ensures maximum system uptime and minimises lost productivity.
- > **IT Audits**
OIA will work with you to determine what level of risk your business is currently exposed to. This will include security, backup schedules, hardware, software and your current processes for recovering from a disaster.
- > **Software**
OIA partners with leading software vendors including Microsoft, Symantec, Storagecraft, Veeam, DocsCorp, Advantys and iManage to deliver software applications that improve efficiency and productivity across your business. Together with our vendors, we will work with you to determine the best solution, tailored specifically to your business needs.
- > **Hardware**
OIA partners with HP and are the only authorised reseller for Synology in Western Australia. OIA also work with Aruba, Cisco, IBM, APC, Eaton, Sophos and many other vendors to deliver the best solution for our customers’ requirements.

About OIA

OIA’s Consulting and Professional Services team are able to deliver a full-service model, encompassing Strategic Planning and Procurement through to Implementation, Asset Management and ongoing support through ad hoc or managed services. Supported by a team of qualified professionals and a comprehensive best-practice library.
